

Čtyři palice (732 m ASL)

Od spravce

Vytvořeno 12/05/2011 - 11:40

Popis

Four massive stone blocks - Čtyřpaličatá, Děvín, Tvrz and Opomenutá - were formed by frost weathering in the early quaternary period. The 50 m long rock formation has a 33 m high wall. Fissures at its top caused the formation of four distinctively formed blocks called "Palice" [Hammers].
